

Purpose: This document captures all security and cost-protection settings applied to the OpenClaw Closer Agent as of March 15, 2026. Keep this on file so you can restore settings quickly if OpenClaw is reset, reinstalled, or reconfigured.

1 · WHATSAPP CHANNEL SECURITY

Setting	Before	After (Current)	Effect
dmPolicy	open	allowlist	Only numbers in allowFrom can trigger the agent. Everyone else is silently dropped — zero LLM calls.
allowFrom	["*"]	["+1", "+973"]	Restricts to US/Canada (+1) and Bahrain (+973) country codes. Blocks spam from random international numbers.
debounceMs	0	3000	Batches rapid consecutive messages from the same sender into a 3-second window → one LLM call per burst, not one per message.
groupPolicy	allowlist	allowlist	Agent does not respond in group chats unless the group is explicitly whitelisted. (Was already secure.)

2 · AGENT ROUTING (BINDINGS)

Rule	Channel	Account	Routes To
Marketing / Closer	whatsapp	default (Saint Labs WA)	photo_marketing_agent
Owner (Cliff)	whatsapp	+16195096448	main (full agent)

The owner binding ensures Cliff's personal number always routes to the main agent, not the marketing agent.

3 · PHOTO_MARKETING_AGENT TOOL RESTRICTIONS

The Closer agent (photo_marketing_agent) runs with a minimal toolset. This limits damage if the agent is manipulated by a malicious prompt.

✓ ALLOWED

- message
- memory_search
- memory_get

⊘ DENIED

- exec
- gateway
- write
- edit
- read
- process
- nodes
- cron
- sessions_spawn
- sessions_send
- sessions_list
- sessions_history
- subagents
- session_status
- agents_list
- browser
- canvas
- whatsapp_login

4 · HOW TO RESTORE THESE SETTINGS

If you ever need to re-apply these settings from scratch (reinstall, new machine, etc.):

- 1. Open the OpenClaw TUI and ask Claw to apply the WhatsApp security config.
- 2. Or run: `openclaw config edit` and paste the values from Section 1 manually.
- 3. Set `channels.whatsapp.dmPolicy` → `"allowlist"`
- 4. Set `channels.whatsapp.allowFrom` → `["+1", "+973"]`
- 5. Set `channels.whatsapp.debounceMs` → `3000`
- 6. Confirm `channels.whatsapp.groupPolicy` is `"allowlist"`
- 7. Confirm the two bindings in Section 2 are present.
- 8. Confirm `photo_marketing_agent` tool allow/deny list matches Section 3.
- 9. Restart the gateway: `openclaw gateway restart`

5 · FUTURE RECOMMENDATIONS (NOT YET APPLIED)

Recommendation	Why
Downgrade Closer model to Haiku	Haiku is ~20× cheaper than Sonnet. For scripted lead intake, quality difference is minimal.
Monthly token budget cap	Hard ceiling on API spend for the marketing agent. Stops runaway cost even if other filters fail.
Trigger keyword gate	Pre-filter messages with a static keyword check before hitting the LLM (e.g., only respond to messages containing "book" or "shoot").
